Projects

Food Court Project

2022 – 12/2022

The project identifies the need to provide the student community with a need to have a say in the food menu that they are served by providing a platform for both the caterers and the students where the students can come and vote for what they want on the menu provided by the caterers on what is feasible.

Risk Based Authentication (On Going)

2021

My research project is based on categorizing the different users to detect valid users from false users using various attributes like IP, location screen resolution, etc.

My job in the project entails:

- Working with different platforms to collect a plethora of various necessary attributes.
- Implementation of an ml pipeline for automating the machine learning workflow.

Object Detection and Extraction

2022

Worked on cityscapes dataset to do semantic segmentation using Unet and detectron2 for object classification

Employee Attrition Rate

08/2022

Worked on finding the Employee attrition rate using deep learning using a sequential model with an F1 score of 65%

Whatsapp Spamer

2019

Made using selenium now spamming your friends on WhatsApp is made easy!

Experience

Data Science Intern, *Xoriant*

2022

Worked on cityscapes dataset to implement semantic segmentation and object detection.

Pune

Front End Developer, *Balajee Banking Solutions*

2020

Was responsible for creating a virtual presence for the establishment and providing functionality for easy access to the consumers to contact and quote prices. My job further entailed SEO for the company.
